Abstract
Technological advances have directly impacted the way science is communicated, reducing borders and connecting individuals, but the language barrier still persists as a significant obstacle to collaboration between researchers and the dissemination of knowledge. Publications in English have a wider reach, making it possible to disseminate the results of studies and research in national journals. Cadernos Ibero-Americanos de Direito Sanitário (CIADS), in the wake of this vanguard, is now publishing its original articles, reviews and short communications in English, at no cost to the author, in addition to maintaining the original language. This important step marks the journal’s innovative editorial path towards internationalization.

Keywords

Resumo
Os avanços tecnológicos impactaram diretamente a forma como a ciência é comunicada, reduzindo fronteiras e conectando indivíduos, mas a barreira linguística ainda persiste como um obstáculo significativo para a colaboração entre pesquisadores e a disseminação do conhecimento. Publicações em inglês têm alcance ampliado, viabilizando a difusão dos resultados dos estudos e pesquisas dos periódicos nacionais. Os Cadernos Ibero-Americanos de Direito Sanitário (CIADS), na esteira dessa vanguarda, passam a publicar seus artigos originais, resenhas e comunicações breves em inglês, sem custo para o autor, além da manutenção do idioma original. Este importante passo marca uma inovadora trajetória editorial do periódico, rumo à sua internacionalização.

Resumen
Los avances tecnológicos han impactado directamente la forma en que se comunica la ciencia, reduciendo fronteras y conectando individuos, pero la barrera lingüística aún persiste como un obstáculo significativo para la colaboración entre investigadores y la difusión del conocimiento. Las publicaciones en inglés han ampliado su alcance, facilitando la difusión de los resultados de estudios e investigaciones en revistas nacionales. Siguiendo esta vanguardia, los Cadernos Ibero-Americanos de Direito Sanitário (CIADS) ahora publicarán sus artículos originales, reseñas y comunicaciones en inglés.

Technological advances have directly impacted the way science is communicated, reducing borders and connecting individuals. The 2021 editorial, which celebrated the 10th anniversary of Cadernos Ibero-Americanos de Derecho Sanitário - CIADS, already stated that the “advent of the internet and the open access system has meant that information has circulated with unprecedented speed, both in the scientific world and beyond” (1).

We are living in the fourth digital age, characterized by greater interdisciplinarity and international collaboration between research groups aimed at tackling complex problems affecting global society, including the guarantee of the right to health. However, the language barrier persists as a significant obstacle to collaboration between researchers and the dissemination of knowledge.

Studies (2,3) have shown that English is considered to be the lingua franca of science, and publications in this language are more likely to be read and cited, as well as attracting a more diverse audience of researchers, academics and professionals, thus increasing visibility on the international academic and scientific scene.

This is why the first editorial of CIADS 2024 comes to announce that from volume 13, number 1, the publications will be presented in their original language and in English, without this translation representing a cost to the author. As well as marking an important milestone in CIADS editorial history, this change responds to the growing demand for global access to scientific knowledge and the internationalization of the journal itself.

It is indisputable that Health Law deals with issues that transcend geographical borders, given that the right to health is debated and guaranteed worldwide by a set of laws and regulations specific to each country, but based on common international principles and standards. Therefore, the translation of the studies and research presented here will represent a greater reach, reducing linguistic and/or geographical barriers.

We would also like to announce the expansion of our team, with the addition of a proofreader and a translator, as well as a change in our executive editor, who will be adding to the efforts of those already working at CIADS. This is how we end this editorial, thanking all those involved - authors and collaborators - for their continued and enthusiastic support, while asking you to share the news here on your social and academic networks.

We believe that these changes, together with the journal's open-access and free-of-charge policies, will greatly strengthen CIADS' role in the scientific dissemination of Health Law.
